Bibliogov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 42 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. GAO reviewed the changes made in the Armys remotely piloted vehicle (RPV) program during the past 2 years and analyzed the work that remains ahead. This report is one in a series of annual reports on the status of selected major weapon systems. The Army is developing the RPV to provide field surveillance information which it relays to supporting ground units. GAO noted that the cost of the RPV program is estimated to be 2.44 billion, an increase of 1.9 billion since the baseline estimate in 1978. A major part of this increase was due to technical problems, reduced funding allocations which lengthened the programs schedule, and the addition of an infrared vision system. The remaining increase is attributable to changes in the systems concept that involve enhancements necessary to expand mission capabilities. GAO believes that the number of enhancements may represent too ambitious a program and that the potential exists for additional substantial cost increases. While most of the subsystems which had earlier technical difficulties have shown good progress when tested individually, their integration may prove difficult and this may delay initial production. Other significant problems which developed during the past year involved the vehicles weight and the software which overtaxed the computers internal capacity. GAO found that the tight development schedule allows little room for setbacks. This item ships from La Vergne, TN. Paperback.
